For years, psychology turned its attention to the study of negative emotions or negative affect, including depression, sadness, anger, stress and anxiety. Not surprisingly, psychologists found them ① interesting because they may often lead to, or signal the presence of, psychological disorders. However, positive emotions are no less fascinating, if only because of many common-sense misconceptions that ② exist about positive affect. We tend to think, for example, that positive affect typically, by its very nature, distorts or disrupts orderly, effective thinking, that positive emotions are somehow “simple” or ③ what, because these emotions are short-lived, they cannot have a long-term impact. Research has shown the above not to be the case, but it took it a while ④ to get there. It is only relatively recently that psychologists realized that positive emotions can be seen as valuable in their own right and ⑤ started studying them.

In Ancient Rome, messages sent over short distances, for which a quick reply was expected, were written with a stylus on wax tablets ① mounted in wooden frames that folded together like a book. To modern eyes these tablets, with their flat writing surfaces surrounded by a wooden frame, look strikingly ② similar to tablet computers. The recipient's response could be scratched onto the same tablet, and the messenger who had ③ delivered it would then take it straight back to the sender. The tablets could be erased and reused by smoothing the colored wax with the flat end of a stylus. Within the city, this was a handy way to send a quick question to someone and ④ get a reply within an hour or two. Letters sent over longer distances ⑤ written on papyrus, which was more expensive but lighter and therefore more suitable for transport. A single sheet of papyrus typically measured about six inches wide by ten inches tall, which was enough for a short letter.

Domesticated animals were frequently utilized as weapons and equipment in ancient wars. The Greeks often used elephants as war equipment. Intended primarily to ① terrify the enemy, elephants were elaborately decorated with ornaments, such as headpieces and clanging bells. They were occasionally given fermented wine to drink, ② encouraging fierce behavior. However, the use of elephants on the front lines was probably more a ③ display of strength than of their practical use as a war animal. Elephants are not ④ effective in fighting human wars; if bombarded by arrows, an elephant will simply turn around and retreat, often inflicting more damage on his own army than on the enemy. Further, a female elephant will refuse to fight if separated from her young, and she would immediately ⑤ assume all military duties and rush to the rescue if her offspring cried out when wounded or trampled upon.

Firms exist in capitalistic societies to make a profit. If the firm's product were viewed as a one-time-only purchase by consumers (e.g., novelty items such as the pet rock), if the level of performance were not subject to regulation, and if only ① limited cross-communication channels were open to consumers, then customer satisfaction would be an unimportant goal for the purely profit-oriented firm. Few producers, however, ② encounter these conditions. Most find that repeat purchasing is essential to a continued stream of ③ profitability. Even for products with long purchase intervals (e.g., major appliances, automobiles), satisfaction is important because of word of mouth and the activities of numerous watchdog organizations, such as Consumers Union, that ④ track reports of satisfaction over time. Now becoming more available, empirical data on the influence of satisfaction, quality, and other such measures are ⑤ contradicting the long-held assumption that customer satisfaction is one key to profitability. Quite often, people will come up to me after a seminar and say that they have decided upon their financial goal. When I ask them what it is, they tell me that they have decided to become a millionaire or even a billionaire in the next year or two. In almost every case, these people turn out to have no money or very little. They are often in their thirties or forties and have a lifetime of financial mismanagement behind them. Nonetheless, they think that they can neutralize all their past experiences and somehow leap into wealth and affluence with little preparation, few resources, and no clear idea of how to get there. They believe that all they need to do is to think happy thoughts and they will magically attract everything they need to overcome decades of frustration and failure. When people say to me that they want to be a millionaire as soon as possible, I suggest that they first become a “thousandaire.” After they have managed to save a thousand dollars and get out of debt, they can then become a “ten thousandaire,” and so on.

In everyday life, people are repeatedly exposed to different aspects of consumption. Advertising, traveling on a train, grocery shopping, watching television, listening to music, surfing the Internet, clothes shopping, and reading a book are all examples of things that people consume. Almost all behaviors that humans engage in are directly or indirectly linked to consumption. Even traditional holidays such as Christmas are these days mainly about consumption. What was originally a religious holiday has mainly been overtaken by aspects of consumption with the most typical example of this being Santa Claus delivering presents. Basically there is no way of escaping the fact that consumption is a part of humans' everyday lives. Hence, without studying how consumption affects individuals and groups, one can never truly say that we understand humans.

Imagine that you are standing in a large, square field. On one side of the field a noisy road crew is doing some repairs with a jackhammer. On an adjacent side of the field a street vendor with a food cart is playing a loud, repetitive jingle. With your eyes closed, you could wander around in the field and work out your distance from either the road crew or the food cart by gauging the loudness of the sounds. Knowing both distances would allow you to triangulate your position on the field with an accuracy limited only by your ability to discriminate loudness. What is even more interesting about this example is that you could work out your position in the field even from locations that you had never visited before, provided you had a basic understanding of the principle—two sources of sound in two different locations _____ . Psycholinguistic researchers have found that a person will understand a positive statement in approximately two-thirds the time it takes to understand a negative one. Even if your only objective in life is to motivate others to do what you want them to do, constructive criticism will carry you much further than a negative attack. If someone has done something half right and half wrong, emphasize how great the end product would be if he consistently employed the techniques that worked well. If someone's clothing is attractive and stylish, but his hair looks like it was cut by a blind barber, compliment him on the tastefulness of his attire; and if you have a legitimate need to change his appearance, suggest that he would look even better if he conformed his hairstyle to his clothing style. People unconsciously signal that they are lying through inconsistencies in their nonverbal behavior. If you have ever caught someone in a lie, you might have noticed that statements made later in the conversation contradicted statements made at the beginning, or perhaps his or her gestures seemed to contradict the words being spoken. The person may have acted calm and aloof, but at the same time kept tapping his or her foot, playing with a button or piece of jewelry, and speaking with a higher pitch. Examinations of people's perceptions of courtroom testimony reveal that stereotypically deceptive behaviors don't necessarily trigger suspicion, but inconsistent nonverbal behaviors are frequently interpreted as deceptive regardless of the specific actions that are performed. Research has also shown that familiarity with a person's typical nonverbal behaviors makes it easier to detect deception. In particular, people are better able to tell whether a partner is telling the truth or lying when they have previous experience with that person's truthful behavior.

Sports marketing is not new. The first known athletic event that required paid admission was a baseball game in Long Island, New York, in 1858, where spectators were charged 50 cents. Sports organizers soon realized the financial potential of sporting events and professional athletes. Golfer Gene Sarazen signed an endorsement deal with Wilson Sporting Goods in 1923. The original agreement was for \$6,000 a year plus an equal amount for travel expenses. In 1949 Babe Didrikson Zaharias signed the first significant female endorsement with Wilson Sporting Goods for \$100,000 a year. Coca-Cola partnered with the Summer Olympics in 1928 and remains a sponsor to this day. The first pay-per-view athletic event was a boxing match, the "Thrilla in Manila," with Muhammad Ali taking on Joe Frazier in the Philippines in 1975. It was broadcast to 276 closed-circuit locations. Capitalizing on the popularity of sports, ESPN made its debut in 1979, offering advertisers a new way to reach their target markets. Like speech, most forms of nonverbal communication are symbolic behaviors: A particular body motion or distance does not inherently convey a certain message but does so only because of conventions, or common understandings. Because much nonverbal communication is arbitrary and conventional, there is great potential for misunderstanding when people do not share the same meanings for nonverbal messages—that is, when people have learned different conventions. Probably the potential for misunderstanding is even greater with nonverbal messages than with spoken language. Some of the biggest fears of pre-service teachers include what they are required to teach and whether or not they know enough of the subject matter to teach the class. Your jurisdiction's department of education will have mandated a curriculum for you to follow. Treat the curriculum as the stepping stones of information you are required to teach and your students are to learn. While you are required to follow the curriculum's learning outcomes, curriculum documents don't say how to teach them or how to assess them. Along with the curriculum, there are often approved textbooks that align with the jurisdiction's vision of student learning. Some of the best teachers do not solely rely on the curriculum and textbooks, but will expand on some areas based on student interest. Remember, although you should use the curriculum and textbooks as your guide to lesson planning and instruction, they shouldn't be everything.

When people are stressed they react differently. It is difficult for them to eat and sleep. They become irritable and short-tempered. They may say things in the heat of the moment they would not otherwise say. As couples tend to react differently under stress, one partner may be affected far more than the other and so the relationship is damaged. The answer is to identify the source of stress and see what can be done about it. First, you must accept that you are under stress and that this is causing problems in the relationship. Then sit down together and talk about the issues. That alone is often enough to relieve some of the stress. Whatever the cause of the stress, it is not likely to be resolved easily or quickly, but just recognizing it and having some sort of plan to tackle it is reassuring. Much more important, by sitting down with your partner and talking about it you can work together to resolve it. There is a lot of truth in the saying “_____.”

At the start of the century, interest in advertising was growing and it was not only manufacturers who could see its potential. Politicians also became interested when they realized that "how to sell products" could be applied to sell their own ideas. This was particularly evident during World War I when propaganda campaigns were used as tools to encourage people to continue fighting. For example, the British and Americans spread rumors about the appalling behavior of the Germans, such as making soap out of enemy soldiers. This was done so that people would feel that they could not possibly let such a horrible nation win the war and hence think that it was worth continuing to fight. Many so-called "atrocities stories" were used, and while some did contain an element of truth, many were invented solely for the benefit of the British and American governments. Complications arise when an artist attempts to illustrate a story from outside his or her realm of cultural experience. If the artist has little or no background in a particular area and is unwilling or unable to do thorough research, he or she is in danger of misrepresenting the story through illustrations, especially if an attempt is made to imitate “native” styles. It is very difficult for an outsider to extract details effectively without an understanding of the overall context from which they come. That is not to say it can’t be done. Ed Young, for example, is known for his attention to authentic detail in the artwork he creates for traditional stories from other cultures. In Kimiko Kajikawa’s *Tsunami!*, for example, Young accurately depicts the clothing, hairstyles, and architecture characteristic of mid-nineteenth-century Japan.

Ecological approaches to human health consider human beings as part of a broader ecosystem. Disease ecologists focus on interactions between humans and the environments in which they live, helping to describe and explain patterns of health and disease across space. Humans interact with their environment in many ways that make them more or less susceptible to ill-health. Staying out too long in cold weather can lead to hypothermia, a condition of dangerously low body temperature, or too much exposure to the sun may promote the development of skin cancer, for instance. ____ (A) ____, not all connections are this direct. One of the main ways in which disease ecology has been useful in explaining disease patterns is by considering how characteristics of the environment influence where disease-causing organisms, or the vectors that carry them, can live. ____ (B) ____, many diseases are restricted to tropical climates where year-round warm temperatures allow vectors such as mosquitoes to thrive. Warm temperatures can also speed up the reproduction rates of micro-organisms such as viruses and bacteria, as well as the invertebrates that transmit them, leading to more rapid transmission of disease among humans. Analyzing relationships between people and infectious agents of disease was one of the first focuses of disease ecologists and remains a fundamental part of disease ecology today.

Machu Picchu is surrounded by the Urubamba River located 2,000 feet below the citadel. This river was considered sacred to the Inca partly because nature was sacred to them but also because of the advantages it brought. It curves around the mountain in which Machu Picchu is located and some of the agricultural terraces extend all the way down to the river. The river cannot be navigated at the location of Machu Picchu, but further down it is possible to use boats to navigate to the Amazon River and all the way to the Atlantic Ocean and move people and goods. This may have been purposeful to avoid having people navigate directly to Machu Picchu but still offer a relatively close route of ____ (A) ____.

Proximity to the rainforest was certainly another advantage of the geography of Machu Picchu. The rainforest was the only source of rare products that were prized by the Incas such as colorful bird feathers, butterflies, coca leaves, exotic fruits and vegetables and healing herbs among other products. The Inca would exchange these products with tribes from the rainforest for things that they did not have such as potatoes, guinea pigs, precious stones, quinoa, and gold and use them for religious ceremonies. During World War II, the composer Dmitry Shostakovich and several of his colleagues were called into a meeting with the Russian ruler Joseph Stalin, who had commissioned them to write a new national anthem. Shostakovich heard meetings with Stalin were (A) fascinating / terrifying; one misstep could lead you into a very dark alley. He would stare you down until you felt your throat tighten. And, as meetings with Stalin often did, this one took a bad turn: The ruler began to criticize one of the composers for his poor arrangement of his anthem. Scared silly, the man admitted he had used an arranger who had done a bad job. Here he was digging several graves: Clearly the poor arranger could be called to task. The composer was responsible for the (B) hire / dismissal, and he, too, could pay for the mistake. And what of the other composers, including Shostakovich? Stalin could be relentless once he smelled fear.

Shostakovich had heard enough: It was foolish, he said, to blame the arranger, who was mostly following orders. He then subtly redirected the conversation to a different subject—whether a composer should do his own orchestrations. What did Stalin think on the matter? Always eager to prove his expertise, he swallowed the bait. The dangerous moment passed.

Shostakovich maintained his presence of mind in several ways. First, instead of letting Stalin intimidate him, he forced himself to see the man as he was: short, fat, ugly, unimaginative. So the dictator's famous piercing gaze was just a trick, a sign of his own (C) creativity / insecurity. Second, Shostakovich faced up to Stalin, talking to him normally and straightforwardly. By his actions and tone of voice, the composer showed that he was not intimidated.
